Women’s frisbee braves elements in Santa Barbara

Snatch works its way to the championship bracket by beating UC Santa Cruz

**BY: NATALYA KOSTANDOVA**

The women’s Ultimate team experienced Murphy’s Law to its fullest at Santa Barbara’s Invitational this weekend. Not only did the weather turn from sunshine inherent to SoCal to freezing rain, but the tournament turned into an injury-packed, mud-flinging, and logistically challenging enterprise.

Nevertheless, the Snatches succeeded in beating all expecta-tions — instead of finishing 13th, as seeded, they defeated UC Santa Cruz and finished in the championship bracket.

The weather caused the biggest challenge to the players. Coach Minh Huynh said, “In the rain and mud, every single throw and catch is so much harder than in dry conditions. There were times when it was so mud-dy that blobs of it would stick to the underside of the disc.”

This, however, brought difficulties not only to the women but to the coach herself. “It was challenging trying to say the right words to fire the girls up when I myself was feel-ing as cold and wet as them from trawling the sidelines,” wrote Huynh.

If the weather weren’t enough of a setback, the women also suffered a series of injuries. Tailala Carvalho left the tournament with a broken nose as a result of a powerful huck by a girl on the Santa Cruz team.

Lizzy Trower hurt her knee, while Carolyn Brinkworth had to sit out because of a troublesome hip. Mary Dunlop was blind-sided by a Santa Cruz girl while making a bid on the disc, and Michelle Farkas had to sit out a game after her hands had turned an unnatural color resembling that of a gloomy sky.

Ultimately, the team was down from 12 players to 8 by the end of the game. That didn’t stop Snatch from beating its seed, going from 13th place to anywhere between 5th and 8th place.

The uncertainty related to the final placement of the team stems from the logistical problem that arose from the destruction that the rain caused to the field on which the battles between the teams took place. The administration refused to allow the teams to play on the wet zones of the field on Sunday, threatening them with a $1 million fine in case of refusal, so most of the field was closed.

Gonzales to first follow footsteps of Gingrich

**BY: MARISSA Cevallos**

Though ASCIT president-elect Chris Gonzales still has two weeks before officially grabbing the reigns of the presidency, he is already fulfilling in the role of former president Todd Gingrich just days after winning elections last week.

Gonzales’ first duty was to pick up Friday morning donuts. “Todd’s trying to hand the reigns over as soon as possible,” said Gonzales, who also attended an alumni board meeting on Friday afternoon in Gingrich’s stead.

“So I’m slowly inheriting bit by bit.”

Gonzales’ campaign encouraged students to feel empowered in dealing with the administration, proposing a grievance board to hold administrators accountable for actions that transgress the honor code.

But Gonzales claims his actions with the administration won’t be a far cry from Gingrich’s presidency.

“It’s just the magnitude that will be the main change,” said Gonzales.

“I think the students would be best served by a proactive government, which is one where we schedule regular meetings with the administration. Because it’s not because they try to hide these things from us, it’s that they for-get to ask the students for input.”

As Social Director of ASCIT, Gonzales has organized two for-mals, one concert, and Caltech’s first Interhouse party in nearly two decades. After one year of working with Gingrich on the BOD, Gonzales has the thumbs-up of the outgoing president.

“I think he’s going to do a good job. I think he knows what he’s doing,” said Gingrich. “I think he’s going to be a lot more tied into house concerns and be more active trying to work with Tim Chang and some of the adminis-trators that students might com-plain about frequently.”

Gonzales already has a few immediate goals in mind for the BOD to be elected next week, including finding space for the ASCIT video library after over a year of delays.

“What we didn’t do last year was work as a BOD,” said Gon-zales.

“They worked together great, but didn’t get a lot accom-plished.”

But Gonzales’ loftiest goal of a grievance board, in which he says administrators would be held to the same standards of the Honor Code as the students, is one he says is “not even in the planning stage yet.”

“‘It’s going to be a multi-year effort to get it to happen,” said Gonzales.

“Right now the admin is trying to get students up when I myself was feeling as cold and wet as them from trawling the sidelines,” wrote Huynh.

Massive fighting breaks on streets of Beirut

On Thursday, four people died and 152 were injured as a result of violence that erupted in Beirut, Lebanon.

The riots, which escalated into fights, started on campus of Beirut Arab University and spread onto the streets of the city, elevating from confrontation with sticks and stones into gunfire.

Troops with armored personnel carriers were deployed to break up the fighting, which resulted in thirteen army soldiers being injured. The army was able to set up an overnight curfew in the city.

The violence stemmed from the rivalry between the youths loyal to the Western-backed government of Lebanon and the opposition, which is led by Hezbollah.

The opposition demands veto power in the government and calls for early parliamentary elections. The current prime minister has refused this demands. It is not clear which side started the fighting on Thursday.

Lebanon is still recovering from the 1975-1990 civil wars and often experiences such clashes.

Bush delivers State of the Union address

Carrying out the tradition, Bush discussed some aspects of the American politics in the annual State of the Union address, delivered past Tuesday.

Bush emphasized the need to tighten federal spending and announced a plan to eliminate deficit within five years. He further called for strengthening and reform of Social Security, Medicare, and Medicaid, as well as a standard tax deduction for health insurance, and medical liability laws to protect medical practitioners.

Bush commented on the No Child Left Behind Act, citing it as a source of much improvement in the American educational system. He also proposed reevaluation of the current immigration laws and demanded enforcement of the laws at the work sites.

Bush discussed the development of alternative sources of energy and emphasized the current dependence of America on foreign resources.

Bush pointed out the developments in his war on terror, proclaiming the Shia and Sunni extremists as “different faces of the same totalitarian threat” and accusing Iran of funding terrorism. At the same time, he pronounced his support for the democratic movements in the Middle East, including Lebanon’s Cedar Revolution, Afghanistan’s elections, and the changes in Iraq.

Bush called the war “a generational struggle that will continue long after you and I have turned our duties over to others” and asked for support from the public as well as the politicians.

While discussing Iraq, Bush promised to send reinforcements of 20,000 troops to the area, with majority going to Baghdad. He also called for an increase in the size of active Army and Marine corps by 92,000 in the next five years as well as for an establishment of a volunteer Civilian Reserve Corps to mimic the military reserve.

Bush said that he is pleased with the international support in some issues that affect the United States, such as the nuclear weapon proliferation and fight against AIDS in Africa.

**Technology**

New breakthrough in chips: size does matter

Intel has recently announced that it will start manufacturing of processors using transistors only 45 nm wide, which will allow for significant improvement in speed and efficiency of microchips. IBM also plans to start production of chips using the new transistors.

With the microchip industry always striving to make transistors smaller, this advancement has been much anticipated. It has been increasingly difficult to reduce transistors in size, as the layer of silicon, from which the old transistors were made, was already only 5 atoms thick.

Not only did this pose a problem of scaling transistors down, but it also allowed some electricity to leak out, which reduced battery life and wasted power. The new transistors are to use silvery metal hafnium as their main material. This is a first time in 40 years that the material from which transistors are made is undergoing a change.

**Snatch Beats Seed**

Lizzy Trower, Mary Dunlop, and Veronica Anderson run to prevent an upfield back.

Continued from Page 1 down. As a result, all events were canceled, leaving majority of the teams, including Caltech’s, wondering over their actual standings.

Snatch’s finish above expected is actually not that surprising, given the team’s performance in the past. Said Laura Fishman, “Almost all the tournaments that we’ve been to, we keep improving and we keep beating our seed. We’ve never gone down in our ranking and it says a lot about our team – we just keep improving and we’re always striving to make transistors smaller, this advance-
Students Line Up for Free Pancakes Last Saturday

BY: JOHN SHEN

The Olive Walk is quiet on a late Saturday morning, with nearly all the students still sound asleep, but a commotion can be heard in the Lloyd kitchen bordering the Olive Walk. Inside, there is the sizzle of batter onto skillets and the rustle of chocolate chip bags, peppered with the conversation of a busy kitchen. These people aren’t cooking just for Lloyd, but for the whole student campus.

Even their chatter revolves around the food that they cook. Carolyn Valdez, a Fleming frosh, proudly states her food of choice. “Chocolate chip banana pancakes, because CCF makes pancakes, and they’re awesome,” Valdez says while flipping a chocolate-chip pancake.

On the Olive Walk last Saturday, Caltech’s Christian Fellowship (CCF) served up a pancake breakfast for our school’s early risers. The event supplements CCF’s tradition of serving free blue-slip milkshakes after the midterm grading period.

CCF President Jonathan Gardner, a senior from Blacker, sees the pancake event as fulfilling a need for the undergrad community. “Saturday morning, a lot of people go off campus to eat or skip breakfast,” Gardner explains. “Behind the table of food, CCF members volunteered for the morning to cook and serve. The students chopped fruit, mixed batter, grilled and served pancakes in a buzz of activity. At the table, a queue of students lined up to take a pancake.”

Gardner explained that the event meshed with his faith as a Christian. “It helps us to follow the command of giving things unconditionally or loving uncon-ditionally,” he said.

Savage also mentioned that simple enjoyment was another motivation for getting up early to cook some pancakes. “We’re all happy to be out there, feeding hungry people,” she said. “It helps to lift up the spirits of peo-ple when they get food.”

According to estimates, more than 120 undergrads stopped by to enjoy pancakes and chat. Most came mainly to eat. “I just ate the king of pancakes,” says Ilia Shadrin, a Ruddock sophomore, after finishing a thick 8” pancake. “It filled up my system with one pancake.”

Gonzales sees the board as a group of individuals that would act like the BOC or CRC. “The group would be solely guided by the Honor Code and would have fairly broad powers to rectify any situations that came up.”

But Gonzales is not planning on anything larger than baby steps in the near future. “I’m going to start my presidency as close to Todd’s as possible until I am comfortable with the way of doing things. But I’m not going to force myself to stick to the way things were done in the past.”

President Bush delivered his address to the nation last Tuesday.

The recently elected ASCIT President peers out.

The Spring Career Fair last Wednesday offered students job opportunities.

Global Warming: A Hot Topic

Global Warming

Annual Average

Five Year Average

This graph shows an increase in surface temperatures.

The effect of carbon dioxide on global temperature increase is already known to be logarithmic, but Goldberg’s claim that a doubling of the carbon dioxide concentration in the atmosphere would cause exactly a 0.22°C increase in global temperature was baseless.

tographe’s ham sandwich by the gas-lit flame of the lamp towering above me, my gaze suddenly met the white froth of a fresh bagel, a perfect slice of unburnt tortilla, which has since remained literally frozen in my mind, germinated in me inchoate personal doubts about this whole anthropogenic global calefaction business, which were dismissed only with the mind-clearing breath of an asthalin breeze on a crisp December morning days later.

In this, this isn’t really going to be an article about global warming is it? Right now I’m completely confident on one point, because with about 400 words of the column written I’m on two of them. As yet, no one knows what will happen with this article - a prediction which brings me no end of panic and serendipitously, back to global warming.

The talk in question, given by Fred Goldberg, of the Royal Tech, began, appropriately at the start of January 10, why is the ace sports reporter and my leg, or simply failed to real

Pan’s Labyrinth Fails to Live Up to Expectations

BY: CINDY KO

Pan’s Labyrinth - Guillermo del Toro, 2006

After watching the movie trailer for Pan’s Labyrinth on the Apple website, I was pretty stoked to watch it because it seemed like a movie with a lot of things going for it. Although I wasn’t familiar with the director, Guillermo del Toro, the short snippet of the movie looked polished, well-crafted, and slightly off the beaten trail.

Despite the fact that the movie is about a little girl and her adventures in a fantasy world, it was clear that this was not a children’s movie. That in itself appealed to me. Also, the movie wasn’t about what you would think it would be about. Aside from that, Pan’s Labyrinth looked like a movie that would get everyone talking, which turned out to be true.

It’s already been nominated for several Academy Awards, including Best Foreign Language Film and Best Screenplay. The reviews from various newspapers call it, “a fairytale for adults”, which comically sounds like it could have a natural meaning.

The Picturehouse/Time-Warner website describes the film as “a fantasy-thriller.” Mostly what I had heard from people who saw Pan’s Labyrinth was that it was “gnarlsome” and “violent,” which surprised me at first.

As one who doesn’t stand up to gruesomeness, I was a little apprehensive to watch Pan’s Labyrinth. It was enough to keep me interested, especially now with the Oscar hoopla. Above all, I was attracted to the storyline, which seemed to have the most potential to make it a great and memorable film.

Young protagonist Ofelia travels with her pregnant mother to live with her mother’s new husband, a Captain of Franco’s forces during the wake of the Spanish Civil War.

Against the backdrop of a military fort fighting rebels in the Spanish countryside, Ofelia discovers signs and clues that lead her to a magical kingdom awaiting her arrival—or rather, her return. As Ofelia later discovers, she is purported to be a member of the missing royalty of the underground kingdom, and their world has been put on hold until she appeared to them again.

The movie is in Spanish, so you probably have to read subtitles for two hours. (However, if you have some Spanish under your belt, it’s a good movie to practice listening because the characters don’t talk very fast or use any slang.) I thought it was interesting that some of the creatures spoke variants of Old Spanish, which was a fun detail that I noticed from the medium I was speaking.

I found the movie to be lower than my expectations. It’s true: I perhaps built it up for myself, but Pan’s Labyrinth seemed to have a lot of promise that it just didn’t live up to.

The storyline was fine, but not magical enough for me. I expected a heavier focus on the fantasy world, and less on the things going on in Ofelia’s harsh reality. This touches on the fact that the director adds seemingly gratuitous scenes of torture and violence to the film. It’s hard to say what the purpose was for doing so, but one can only guess that it was to bring the movie into a more visceral arena, and emphasize that this is not a film for children, like Harry Potter.

However, if it’s clear that Pan’s Labyrinth is meant for the older audience, this contradicts the fact that every figure in the movie was flat and caricatured. The “bad guys” were horrible and had scars on their faces; the “good guys” were really good and looked handsome—the protagonist was especially pretty. The only issue of ambiguity was the creatures that came from the underworld: those that were ugly and strange, and yet were ready to welcome Ofelia back to her kingdom by cruelly giving her tasks to prove her worth. The movie is strange, confusing, and surprisingly superficial.

The only thing really worth watching in Pan’s Labyrinth is the brilliant performance by the young Ivana Baquero, who plays the role of Ofelia. Although she’s not on the map in terms of big-name stars, she more than makes up for it with talent, exuding the endless grace and poise of a royal princess for the entirety of the film. Surely Baquero’s performance in Pan’s Labyrinth will open new roles for her in the future.

The cinematography was beautiful. Ofelia can’t remember if it’s a left followed by two rights, or a right and then two lefts. Overall, Pan’s Labyrinth earns a disappointing B-/C+ from me. The cinematography was beautiful and rich, and the art direction was really lovely, but it wasn’t enough to save the film altogether.

I came out of the movie feeling un-moved and awkward, which is definitely not what I expected at all. If you think that Pan’s Labyrinth is a good date movie, or a movie to take your little sister to, you’d be way off track. Actually, I don’t even know if I would recommend it under any circumstances—it wasn’t terrible, it was just terribly disappointing.
The topic I am going to discuss is tied to the mean in potentially unhealthy behavior. The other studies encourages pride between these legitimate studies such, people weighing more than pushes, an emerging field makes positive is very important, but not a negative self image. Keeping not think anybody should have around the neck.

The Dual-crested Cormorant lowered but held in the throat. The coronet picks up the bird squeezes out the fish through the mouth. The bird then dines for an.

Why is it that of all the different animals, the corrominant has been chosen by many day and night for the fisherman.

These obese creatures are no longer physically attractive. These and other studies groups is a much-needed countermeasure to the skinny American ideal, we do not want unhealthy role models for children.

One common pattern is that ideal are occasionally labeled as fat, being fat as having enough fatty tissue to threaten one's wellbeing (coincidentally first definition in the dictionary). According to recent Journal of the American Medical Association articles, people with body mass indices (BMIs) of greater than 40share at higher risk for type-2 diabetes, gallbladder disease, hypertension, and heart disease amongst others. This is the definition of fat I am using.

The Double-crested Cormorant was accepted into its internship for the career fair, Oracle already sent him an email stating that he received multiple offers from all the companies. People can’t help their size for one reason or another, but they are still living with a higher risk of disease in most cases. Regular trips to the doctor can help curtail risks brought on by excess weight, but the fact remains that the doctor is more likely to find a health problem.

First, encouraging people to be proud of their size seems to be finding down a perilous road, analogous to encouraging people to be proud of their smoking habit. Some people can’t help their size for one reason or another, but they are still living with a higher risk of disease in most cases. Regular trips to the doctor can help curtail risks brought on by excess weight, but the fact remains that the doctor is more likely to find a health problem.

Secondly, while it certainly acts as a much-needed countermeasure to the skinny American ideal, we do not want unhealthy role models for children. One common pattern is that ideal are occasionally labeled as fat, being fat as having enough fatty tissue to threaten one's wellbeing (coincidentally first definition in the dictionary). According to recent Journal of the American Medical Association articles, people with body mass indices (BMIs) of greater than 40share at higher risk for type-2 diabetes, gallbladder disease, hypertension, and heart disease amongst others. This is the definition of fat I am using.

BY: HARRISON STEIN

Two years ago, in this very space, my colleague Hamilton and I declared that whatever team would win a tightly contested Super Bowl. He claimed that the team of his youth, the scrappy underdog Philadelphia Eagles, had just enough to clear the hurdle known as becoming Super Bowl champions on New England Patriots. While he couldn’t turn his back on his favorite team, he considered the number of signs that New England was the superior team, and used this to my advantage as I correctly predicted the Patriots would successfully defend their title.

Now, in 2007, the tables have turned. My hometown team, the Chicago Bears, will be thrust into the Super Bowl against the heavily favored Indianapolis Colts, and there are a million reasons why the Colts ought to dominate just like the Patriots, they allowed 34 points a game. However, don’t fall into the trap. These Bears are a defensive juggernaut, and can easily play as well as, if not better than, the 2005 Eagles, and face it, these are no Colts. Consecutive here five reasons why the Bears will be dancing all over South Beach come Sunday night.

1. Defense Wins Championship

Much has been made of the remarkable improvement of Indianapolis’ defense, especially in the playoffs, but don’t buy it. The Bears looked great, on the surface a better team than the Colts, over Kansas City and Baltimore, but in reality, they will always make a defense look fantastic.

The Colts’ defense was complete, and the Bears’ defense was30 points a game worse. The Bears couldn’t complete a pass longer than ten yards, and with Steve McNair missing most of the season, the Bears were pedestrian. In the Super Bowl, Manning has been playing with fire, and ultimately he will burn. While Peyton is capable of winning the Super Bowl by himself, his play has been inconsistent. He has yet to show what the peak of his game will be to tame the Bears defense.

2. The Colts Don’t Function After a Bye

The Colts offense is a beauty to watch, predicated on speed and most importantly, timing. They are an incredible streaky team, evidenced by their 13 game win streak last year and 9 game streak this year. Last year, after rumbuling through the season, the Colts received a bye for the first week of the playoffs. However, on their first game, against theSteelers, the Colts looked completely out of sync as Manning was intercepted and switched into the offensive line missed crucial blocks. In the emotional victory over New England last week, Indianapolis was clicking on all cylinders and probably could have ridden the emotional high into the Super Bowl. Unfortunately, with the extra week, the excitement of the big win is worn thin, and the Colts offense will once again be a step slow.

3. Rex’s Easing Being the Underdog

Think of each of the major sporting championships in the last year: Ohio State was heavily favored over Florida after an emotional victory over Michigan but after a long delay, the Buckeyes are now falling behind as they are chomped to victory. The Detroit Tigers were universally expected to beat the Cardinals after blasting through the AL playoffs, and getting a week’s rest, had no answer. The Miami Heat was supposed to be one last hurdle for the Dallas Mavericks’ coronation, but the Heat showed up to play and the Dallas didn’t. These situations are different than what face the Bears and the Colts. The Bears are expected to win and the Bears are universally disliked. The writers all picked Chicago to lose to New Orleans in the Super Bowl. The Bears will have that extra fire needed to get their hands on the Lombardi Trophy.

4. The Colts Don’t Function Against the Patriots

When: Friday, February 2nd at Noon
Where: Caltech Y Lounge

This will not be the case. While the Bears have been hurt by injuries, and a few keys on defense have been idle, the Bears defense was number one seed in the NFC and completely one-dimensional as the Bears defense was number one seed in the NFC. Given the quarterback advantage, there seems little doubt that the Colts offense will have the time and you probably have to beat the team

5. The Colts Don’t Function With a Winning Record

The Bears on the other hand have been hurt by injuries, and without key players on the defense line and in the secondary are the potent defense that was so dominating last season in the playoffs. It seems that even if Grossman can put up some points on the Bears, Rex is the guy that will be able to return the favor.

The final reason will give you the best reason to explain why the Colts will not win the Super Bowl this year is to consider how each team got to the Super Bowl. The Bears earned the number one seed in the NFC and played a Seattle team that was only one game over .500 at home, and still needed overtime to defeat them. They then beat a team that plays in a Dome in the South, the New Orleans Saints at home in the snow on the strength of a large number of fumbles and fumble recoveries, a dangerously inconsistent way to beat a team. They now are forced to travel to Miami to play the Colts in front of a neutral crowd. The Colts on the other hand beat the Chiefs at home with a newly potent defense that completely shut down one of the leagues better offenses. The Indianapolis team then travelled to Baltimore, a city with no love for the Colts team that left town in the middle of the night before the Ravens moved in from Cleveland, and beat a team with a former MVP quarterback and the best defense in the NFL. They finished their run to the Super Bowl by defeating their arch-rivals the Patriots in the final minutes, coming up more than a minute to the clutch team of the past decade.

Given the quarterback advantage, the ability of the Colts offense to perform against top defenses and the difference in momentum between the two teams, there seems little doubt that the Colts will win the Super Bowl, leaving Bears fans to echo Cubs fans, holding out hope for next year.
