Prefrosh party divides houses

Fleming and Page are pro-party; other houses doubt it can be done in time

BY: VALERIE SYVBERG

Prefrosh weekend might be boasting an Interhouse-style party to compete with MIT’s party-packed weekend, if Fleming and Page can convince the other houses to help with construction. Fleming proposed that the houses cooperate in putting on a second Interhouse-style party in the RF courtyard on the last night of the weekend, citing concerns that many of MIT’s dorms will have parties and other major social events. Last year, Caltech’s Prefrosh Weekend competition, which many of MIT’s dorms were brought up by the faculty. The MOSH, Cathy Jurca, said, “One objection faculty members brought up is what happens if the student doesn’t finish. Would it cheapen the ceremony?”

Senior Emily Russell responded, “I don’t feel like it’s cheapening the ceremony to march with my friends. It enhances it, it doesn’t cheapen it.” Students argued that commencement for them is a social activity, where they can celebrate having spent four years with their class. Fleming proposed that the houses to help with construction.

Super seniors might walk with class

BY: ANDREA DUBIN

Caltech students are overwhelmingly in favor of allowing seniors with one more term of work to walk with their class on commencement, according to an Open House last Tuesday in which the administration discussed the proposed change, which could be implemented as early as this spring.

The change would allow seniors who have not quite completed their graduation requirements to participate in graduation ceremonies after an approval from the Dean or UASH, provided they can finish up within one quarter.

Most of the 30 students who came to the Open House in the Blacker courtyard supported the change. Mike Woods, IHC Chairman, said, “A number of seniors never get to walk because they can’t get a day off to come back for commencement.” This is especially an issue for international students. Mary Morley from the Registrar’s office added, “Many students elect not to come back because they don’t feel like they are a part of that class or ceremony.”

While most of the students supported the change, a few concerns were brought up by the faculty. The MOSH, Cathy Jurca, said, “One objection faculty members brought up is what happens if the student doesn’t finish. Would it cheapen the ceremony?”

Senior Emily Russell responded, “I don’t feel like it’s cheapening the ceremony to march with my friends. It enhances it, it doesn’t cheapen it.” Students argued that commencement for them is a social activity, where they can celebrate having spent four years with their class. Fleming proposed that the houses to help with construction. Fleming and Page are pro-party; other houses doubt it can be done in time.

The Sixth Chamber, with Caltech junior Mike Ferrara on drums, performs at Saturday night’s Decompression on the roof of Winnett.
**Prefer party — From the Editor —**

Caltech isn’t MIT. We might not possibly throw dozens of parties every single day like they can in Bonsall Hall and they sure as hell don’t want to be a large school like us if we tried. But that leaves us to attract prefrong on campus. We need to get more people into close-knit, and put together an image that’s a jealously guarded secret of a party whom we like them.

So why don’t we? Because prefrong is often implicitly governed by Rotation Rules, on the premise that all of the prefrong will matriculate at Caltech, who study, who is going to throw an on-campus party. We already are. We’ll try to try to try to see that we do it in the right way.

Fleming’s proposed party is an excellent first step to move away from house-based activities to on-campus events where I brought up the Ricketts honor system history (no pun in intention). Fleming’s insights and experiences are valuable.

Honor Code only works with understanding

CRAIG MONTUORI

This week I’ll be discussing differences in Honor Code interpretation between different groups on campus: students, faculty, and grad students. As always, I try to express my opinions so that they are a responsible and respectful response to the advertisements, and try to always be a responsible and respectful part of the Tech community. However, I hope no one is taken aback by this article, because I express my views clearly and openly.

EU sets energy targets

Leaders of the European Union agreed to establish binding targets for renewable energy sources but put off the actual decision as to how these targets would be achieved to the European Commission. Swedish Prime Minister Fredrick Rein- feldt also stated that the EU agreed to reduce carbon emission levels to 20 percent below what they were in 1990.

Germany proposed an ambitious plan to cut carbon emissions by using more renewable energy sources. Poland, the Czech Republic, France and all voiced strong opinions in favor of nuclear fuel as an alternative source of energy.

“We have got to go for a sensible solution, for the right policy mix, which will ultimately deliver results for our grandchildren,” German Chancellor, Merkel who headed the summit said in the beginning.

An East-West split emerged at the talk with poorer European nations such as Poland opposing the push by the Western nations stating that they lacked the resources to invest in costly energy alternatives such as wind, solar and hydroelec- tric.

Business and labor leaders worried against slowing down of European economic growth in the scenario of imposing extremely stringent measures. Leaders were themselves at odds over certain issues such as replacing ten percent of transport fuels by biofuels.

Europe produces only 15 percent of the global carbon dioxide. If this deal is signed by the EU, it will push other global polluters such as U.S., Canada, Russia and Japan. Source: www.time.com

Riots also occurred in the Southern city of Porto Alegre, Bogota’s National University in Colombia, and Panama City and involved slogans as well as effigy burning.

Bush plans to visit Brazil, Uru- guay, Colombia, Guatemala and Mexico as part of his tour. He will not be visiting countries under Chavez’s sphere of influence such as Nicaragua, Ecuador, Argentina and Bolivia.

Engineering graduate creates beer-launching refrigerator

John Cornwell, an engineering graduate from the Duke University has designed a contraption that re- place the beverage delivery systems. After graduating a year ago and joining a software firm in Atlanta, Georgia, Cornwell missed his col- lege life enough to design a refriger- ator that mirrors beer cans about twenty feet away at the click of a remote.

“I missed the college scene. It embodies the college spirit that I didn’t want to let go of,” he said. It took about 150 hours and $400 to convert a mini-fridge into one that launches up to ten cans before it needs a reload.

The remote Cornwell has used for this unique machine is a car’s keyless entry device. On pressing a button, a small elevator inside the fridge lifts a can to the catalpng arm from where it is aimed straight onto the couch in front of you. Cornell speaks of dening a few walls and al- most breaking his television monitor before the catalpng was fine-tuned.

“I did launch a lot watching the Super Bowl,” he quoted. “My friends are the reason I built it. I told them about the idea and they hyped it so much and I had to go through with it.”

THE WORLD

U.S.

Bush begins South America tour amid protests

President Bush started his week-long tour in Latin America on Monday. Bush is expected to land in Sao Paulo, Brazil on Thursday on a mission intending to encour- age democracy and trade and usage of alternative fuels.

Another important reason for the President’s trip also remains to balance the growing influence of leaders such as Venezuela’s leftist President Chavez who is aligned with Cuba’s Fidel Castro and is on a riveting warpath.

Police baffled with students, en- vironmentalists as well as leftist Brazilians, some waving commun- ist flags ahead of the president’s visit. Tear gas and batons were used on a crowd of about 6000 peaceful protesters on a march in the financial district.
The NCAA Tournament is back in full force, and this year figures to be wilder than ever. There are no dominant college basketball teams, as even the top seeds Florida, North Carolina, Ohio State and Kansas have glaring weaknesses that cancel out many of their strengths.

It is (nearly) statistically impossible to predict all 64 games of the NCAA Tournament correctly, as there is a high variance in the results for each game. Sure, a 12 seed will probably beat a 5 seed during the first round, but there are four of these games so you have a 25% chance of predicting the upset...if it even happens. That being said, there are a number of pointers you should follow before filling out a bracket. Some of these theories are well-known and have been well-dissected while others are my brain-child. If you read this same column three years ago, some of the points have been repeated and updated while others are new—and this year, I have added some historical statistics compiled by tournament guru Peter Tiernan.

1. You cannot beat a #2 seed beating a #5 and eventually making the Sweet Sixteen. Last year, Texas A&M upset the horribly overrated Syracuse Orangeman and Montana surprised the upstarts from Nevada, Syracuse Orangeman and Montana upset the horribly overrated Oregon A&M upset the horribly overrated conference champion and eventual Final Four team LSU.

This year, watch out for Illinois vs. Virginia Tech, but especially keep an eye on my upset pick of Old Dominion upset of Texas A&M was in fact the first upset from defeating eventual Final Four team LSU.

2. At least one #2 seed will lose. At least one #2 seed will lose during the first round, but there were four of these games so you have a 25% chance of predicting the upset...if it even happens.

3. Pick at least one #1 seed to make the Final Four, but don’t pick any more than two or three. Also, one or two of the #1 seeds will lose before the Elite Eight round. The #1 seed has never made the same Final Four as at least one #2 seed has never made the same Final Four as at least one #2 seed last season beating heavyweights Michigan State, North Carolina and Connecticut before succumbing to eventual champion Florida in the Final Four. However, only three #1 seeds reached 6 had ever reached the last weekend of the tournament. The average seed of a Final Four participant is 2.61. Pick a few upsets, but don’t go overboard as teams like George Mason comes along the way.

4. Overrated defending champions lose early in the tournament. In the last two years, defending champion North Carolina and Connecticut were badly miscast as top three seeds. Both predictably met their demise in the second round. Of the last 17 NCAA champions, a whopping 13 have lost to a lower seeded opponent the following year. Expect Florida to make an early exit.

5. Two teams from the same conference are going to make the Final Four, but one will be a surprise. In each of the last 8 Final Fours, two of the teams have belonged to two different conferences. Typically, one of these teams is a conference champion and the other is an underdog. In five of the six years, the better teams reached the final while the lesser team bowed out in the Final Four. UCLA should make the Final Four as a #2 seed in the loaded West region, but expect underrated Pac-10 regular season champions, a whopp-...ing 12 will lose to a lower seeded opponent the following year. Expect Florida to make an early exit.

6. Never underestimate teams that underachieved during the season. Do not overlook journalists picked to upset #3 Pittsburgh before getting knocked off by #11 Northern Illinois. As a select few college towns, don’t have any unreasonable expectations about your team’s ability to fill out a proper bracket. As much as I would love to think they’ll even get out of the first round. Unless you’re from Chapel Hill, Los Angeles or a select few college towns, don’t have any unreasonable expectations about your team’s ability to fill out a proper bracket. As much as I would love to think they’ll even get out of the first round. Unless you’re from Chapel Hill, Los Angeles or a select few college towns, don’t have any unreasonable expectations about your team’s ability to fill out a proper bracket. As much as I would love to think they’ll even get out of the first round.

7. Duke will lose in the Sweet Sixteen. The country’s least lik-able team is also one of its favorites. Duke has reached the second weekend of the tournament every year since 1998. In 5 of the last 7 years, the #2 ranked Blue Devils have lost in the Sweet Sixteen. Since Duke is a #1 seed this year, it’s a little tricker than usual, but history doesn’t lie. Expect to upset #3 Pittsburgh before getting knocked off by Kentucky or Texas’ freshman sensation Kevin Durant along the way.

8. Kentucky, Duke will lose in the Sweet Sixteen. The country’s least lik-able team is also one of its favorites. Duke has reached the second weekend of the tournament every year since 1998. In 5 of the last 7 years, the #2 ranked Blue Devils have lost in the Sweet Sixteen. Since Duke is a #1 seed this year, it’s a little tricker than usual, but history doesn’t lie. Expect to upset #3 Pittsburgh before getting knocked off by Kentucky or Texas’ freshman sensation Kevin Durant along the way.

9. Don’t let your judgment cloud your ability to fill out a proper bracket. As much as I would love to think they’ll even get out of the first round. Unless you’re from Chapel Hill, Los Angeles or a select few college towns, don’t have any unreasonable expectations about your team’s ability to fill out a proper bracket. As much as I would love to think they’ll even get out of the first round. Unless you’re from Chapel Hill, Los Angeles or a select few college towns, don’t have any unreasonable expectations about your team’s ability to fill out a proper bracket. As much as I would love to think they’ll even get out of the first round. South House Kitchens: Restaurant Review

BY: HARRISON STEIN

As a senior, I have lived through one of the most turbulent and unpredictable eras in recent Dining Services history. I survived the simultaneously brilliant and numbing vision of the all-you-can-eat South Kitchen lunches. Then the South Kitchens closed permanently and Chandler re-opened with hiked prices. The old South House is no more and was only recently replaced. With regard to dining, the Caltech community has been through a lot in the last few years. But now, the brand new South House has opened and finally, everything has come full circle.

Back in the day, the South Kitchen was essentially a Chan- dler replacement for large South House lunches that would be served out of bed at noon, scamper to the kitchen, and eat lunch in their respective courtyards. The new kitchens are more of the same, but the food options are unique and refreshing.

Like Chandler and the old South Kitchen, the new kitchen has a wood-fired oven used expressly for pizzas. I wasn’t expecting much because I have also seen oven looks like the one in Chan- dler and the ingredients are identi- cal. Nevertheless, it was pleasant- ly surprising. Needed is to get something quick before golf class, I picked out a thin crust, pepperoni and pepperoni pizza sitting on the counter. The pizzas were hot and crispy but not-burnt on the bottom. The cheese seemed to have more zest than usual and thankfully didn’t disappear after one bite. Perhaps I’m excited to finally eat much closer to my house but I honestly think there’s something special about this new pizza. Even if you don’t like the pizza station I wholeheartedly recommend you try this new variety.

One of the more controversial features at Chandler is the Bison Burger. Costing seven or eight dollars, it’s a burger of high quality meat, but for vari- ous reasons Kobe isn’t conducive to being eaten in a large bulk. In the South Kitchen, they have remedied the situation by intro- ducing a new line of burgers modeled on White Castle sliders. While you only get two (very) small burgers, the smaller size is more appropriate for a fine steak like Kobe. Because you can sa- vor the beef in small doses, it’s easier to enjoy each bite without the meat becoming too overpow- ering. I added a dollop of steak sauce to mine and it significantly helped. The dish is pricey and it’s hardly filling, but it’s truly exqui- site to feel the Kobe Beef melt in your mouth.

While the pizza and burgers both taste good, the thing that really sets the South Kitchen apart is its sandwich line. Unlike past attempts that served sub- stituted sandwich meat, the South Kitchen has carved roast beef, turkey, ham and corned beef. In addition, they have a diverse se- lection of La Brea breads lighted by sourdough, French roll and my favorite, ciabatta. Each sandwich includes a sug- gested list of condiments but you can mix and match as you wish.

I personally tried three sand- wiches and thoroughly enjoyed two. Because I have always been a corned-beef-aphobic, I was initial- ly reluctant to try the Santa Anita which also includes mustard and rye bread. Nevertheless, I took a risk and ordered the sandwich with lettuce and tomato on sour- dough. To my surprise, the carved corned beef was very tasty and the mustard did a decent job bringing out the flavor of the meat. Given my aversion for the meat, I think the sandwich was about as good as I could have expected. Of course, another thing that the sandwich was about is a little bit windy. In the other hand, I’m curious what a true corned beef fan thinks of the Santa Anita.

I had a considerably less enjoy- able experience when I ordered the Chandler sandwich of carved turkey, pesto, tomato and provolone on ciabatta. Of all the carved meats, turkey is the least suitable for sandwiches because white meat is typically dry without gravy. The meat of the Chandler was no exception. While the pesto sauce is tasty, it is not powerful enough to disguise the dry feeling of the turkey. I was very excited about the sandwich because eating pes- to with meat is one of my favorite pastimes but I was soundly dis- appointed. Perhaps I caught the turkey on a bad day, but of all the meals I ate at the South Kitchen, the Chandler is the one I would least recommend.

On the other hand, there is one sandwich I would recommend without hesitation: the Reyes consists of roast beef, sautéd mush- rooms and onions, provolone and horseradish. I tested the sandwich on ciabatta bread and the results were delectable. The carved roast beef is mouth-watering and really adds a new dimension of flavor absence of any store-bought roast beef. The mushrooms and onions added an interesting twinge of fla- vor and the ciabatta bread favor- ably contributed to the texture of the sandwich. The Reyes is prob- ably one of the best sandwiches I’ve had at my time at Caltech.

All in all, the South Kitchen is a nice little outfit that provides re- lief to the monotony that has become Chandler lunches. The new- ness definitely adds something to the Caltech dining experience and it’s something you don’t get tired of (at least until after I graduate next term). However, to those wo- rrying that the menu is too small, help is on the way. Says Food Chair Erin White, “We are going to try some new things—I defi- nitely believe it.”

Miller’s graphic novel style rings false in 300

BY: KYLE LITTLET

A few days ago I had the mis- fortune of getting into an argu- ment with a friend about the upcoming Robert Rodriguez/ Quentin Tarantino double feature Grindhouse. One cantankerous user posted, “I wish Tarantino and the Persians at Thermopylae, di- rected by Zack Snyder created more of adapting this story about the feat. Unfortunately, in the process of stylizing, but visual intensity doesn’t mark its time as its own. Rodriguez made Sin City work by bringing that look to elements to life. Snyder looks for where those elements already exist in the world and make mimics the graphic novel look by literally applying a tincture of comic book elements. Snyder’s voiceovers enhanced what was happening onscreen rather than merely restating it. Its wildest shots evoked the pacing of tilted and jagged-edged comic frames; in 300, the alternating speed- up, slow-down timing as King Leonidas attacks the Persians into a group of Persian soldiers feels like it was pulled right out of Troy or Alexander. Just about the only moments reminiscent of a real graphic novel are when Gerard Butler shows us how wide he can open his mouth while yell- ing. Rodriguez flawlessly cap- tured a sense of noirish despair and introspection in his film, and while you couldfault the difference in source material for forc- ing a sense of epic grandiosity on 300, you can’t help but marvel at the fact that Snyder chose the kind of perfecting, aloof grandios- ity that we have come to expect from movies about warfare in the ancient world. But Frank Miller is not a perforctly graphic nov- elist. Even when his characters take stoicism and coldness to ex- tremes, his stories are told truly emphatically, and adaptations of his work should not be done any other way.
Polar bears are taboo topic for gov scientists

BY: VALERIE SYVERSON

Newly publicized restrictions on unauthorized talk about polar bears have inflamed the suspicions of environmental groups regarding government censorship of science.

In e-mails from the U.S. Fish and Wildlife Service released by the National Resources Defense Council last week, government-employed biologists and wildlife officials were advised that foreign travel requests “involving or potentially involving climate change, sea ice and/or polar bears” would henceforth require a memorandum regarding “who’ll be the official spokesman on the trip and the one responding to questions on these issues, particularly polar bears.” Two example memoranda were attached, both specifying that the traveler “understands the administration’s position on climate change, polar bears, and sea ice and will not be speaking on or responding to these issues.”

In an interview with CNN, the director of the Fish and Wildlife Service claimed that the new requirements were part of a long-standing policy meant to keep government scientists from digressing in public at overseas meetings with set agendas. However, environmental activists have called it “a veiled attempt to censor scientific speech on issues related to global warming.”

In particular, last year the New York Times reported that political appointees at NASA had discouraged news releases on global warming and canceled press interviews with climateologists.

Polar bears have been politically prominent since early in 2005, when the Center for Biological Diversity petitioned the FWS to list them as “threatened” under the Endangered Species Act due to habitat loss from Northern Hemisphere icecap melting. The agency was legally obligated to respond to the petition within 90 days but did not do so. The Center for Biological Diversity and NRDC finally filed a lawsuit against them in California last December, at which point the U.S. Department of the Interior decided to also propose the “threatened” designation. If implemented, the designation could force climate change is that since the Committee on Student Affairs is set to review the addition, the recently convened Committee, had some concerns about requirements and standards for greenhouse gas emissions. A decision on the listing is expected in January 2008.

Feldblum leaves fourth vacant office

FELDBLUM, FROM PAGE 1, 2007

 collaborative efforts of bringing students, staff, and faculty together,” said Dr. Feldblum, who also cited the improvements in diversity and minority support as one of her primary contributions to Caltech. “I’ve learned how important it is to understand complex needs,” she added.

“The things that stand out most about her are that she’s really smart, she’s a very hard worker, and she’s also a personal and effective manager,” said Dean Hall.

Dr. Feldblum’s departure creates another vacant office in Student Affairs, whose empty positions already include Vice-President of Student Affairs, Women’s Center Director, and Director of Performing and Creative Arts. “It’s been hectic,” said Dean Hall, “but people are really dedicated and enjoy what they’re doing here.”

There are no immediate plans to hire a replacement for Dr. Feldblum, since, according to Dean Hall, a new President is a more pressing concern. In addition, the recently convened Committee on Student Affairs is set to review the structure and positions of Student Affairs, which will directly impact future hiring.

Fleming suggests prefrosh Interhouse party to help Caltech compete with MIT’s weekend

PARTY, FROM PAGE 1

There was also concern over having the Deans make the decisions, since Deans could vary in their lenience. Proposed solutions to this problem included having the decision to accept a students petition to march go before UASH or before a faculty vote. It was also suggested that there be specific cut offs on how many people or hours a party, as it would be the fourth party they would have built this year.

Apart from difficulties in building concerns were expressed by Dubney and Rickerts that the end result might not even be a particularly good party. PPW is the fourth week of third term, giving very little time for all the planning necessary to make such a major social event enjoyable; in addition, the PPW rotation rules would demand that the party be “dry,” making it even more of a challenge.

“If we want to do this, we should plan it in advance for next year,” says Salomon. “For this year, we don’t have enough time.”

How not to fail finals week: the guide

BY: HAMILTONY FALK

For many students one of the most difficult times of the year is coming up, and I’m not referring to pretending to know what’s going on in this year’s NCAA Men’s Final Four tournament. Rather it is finals week, the time of the year when people suddenly stop paying attention to gnashing of teeth and wailing because it truly is the most magical time of the term.

Some people avoid finals byunderloadingas seniors and only taking 15 units on pass fail, and some others avoid finals by failing out or transferring. Unfortunately these are not viable options for everyone, so as a benevolent senior I’ve decided to impart some of my wisdom in order that there can be a little bit more happiness in this cruel hard world.

One easy way to avoid a soul-crushing experience is to be careful in course selection. Remember, every credit over the graduation requirement of 486 hours is like a sliver of bamboo under your fingernails that you didn’t have to experience, so plan ahead and make sure you don’t take too many classes you’re not interested in.

In addition there are some courses that don’t have finals, such as the 1 PE (whatever the last number for a PE is)! as well as many Hums and even some courses in your very major. Take these whenever you can but make sure you take fewer finals than all of your friends every year of your five or six at Tech.

When finals week arrives, you’ll want to budget your time wisely. Too many students end up rushing some finals or compromising other aspects of their life because they didn’t plan ahead. If we assume each day is 30 hours long for sleeping, 1.7 for eating, an hour or two for checking your e-mail and reading the newspaper and 8 hours every 6 and a half days for hygiene, that leaves plenty of time to work, assuming you don’t waste all your time planning out your work schedule. Ideally you should take one final every day at the same time, and make sure not to eat or exercise for two hours before each final, and avoid using your finals desk to read or watch TV, as this will interfere with your body’s natural final taking (or “circadian”) rhythms. Finally, you can get more time on your finals (without violating the honor code) by randomly making up answers before looking at your final, and simply remembering and then writing these down for the longest questions.

Another strategy to make finals week more pleasant is to maintain a healthy lifestyle during the week. This means you should eat right, avoiding unhealthy things such as fatty foods, excessive caffeine or alcohol, whatever. You should serve your own tears over the smoldering dreams of orphans.

A final piece of advice is to remember that finals weeks is only a week and afterwards you’ll have the blessed relief of winter break or spring break or summer break, depending on the term. Unless you don’t finish on time and you have to take an extension, but then at least you’ll be done the next few days afterwards. Unless you take an E and have to keep working until the add day the following term, but you’ll be done at that point. Unless you fail the class and have to take it again, but then at least you’ll be done the next time you take it. So remember, you’ve almost done, unless things go wrong.

Footnotes

1 PE (whatever the last number for a PE is) is of course mountain bicycling.

2 If you spend more or less time than I have suggested on any of these activities you will almost certainly run out of time and fail all your finals.

In the sense that being eaten by a cat is much better than being eaten by the face with two sacks of quarters.

Five minutes of swallowing your own tears as you sob after finishing a physics final will provide more than 80 percent of your daily value of sodium based on a 2000 calorie diet.

You call that heckling? Mark Eichenlaub lays down how to get kicked in the face.

BY: MARK EICHENLAUB

You look, you wanna heckle, you better do it right. Stand up and shout it out loud, you aren’t being eaten by a cat.

Your heckling’s so jaded, it’s Lassie’s exact opposite! Your heckling’s so annoying, I’m going use it for my new ringtone! Your mother doesn’t love you any more? That’s not a heckle.

You know why your mother doesn’t love you now? Because she never did. You were born in the bathroom of a run-down A-frame in Visalia. She never did. You were born in a cheap porno. The only help she had was from a pimple-faced alcoholic in a cheap porno. The only help she had was from a pimple-faced teenager in a purple polo shirt and giving an algebraic geometry seminar next week!

Your heckling’s so unoriginal, it’s repetitive. Your heckling’s so stupid it’s repetitive. It says the same thing over and over again. It’s repetitive.

Your heckling’s so dull, it’s repetitive. Your heckling’s so offensive, it’s repetitive. Your heckling’s so boring, it’s repetitive. Your heckling’s so unoriginal, it’s repetitive. Your heckling’s so annoying, it’s repetitive. Your heckling’s so offensive, it’s repetitive. Your heckling’s so repetitive, it’s repetitive. Your heckling’s so dull, it’s repetitive.

XKCD by Randall Munroe

I HEARD YOU'RE ONE OF THE BEST IN THE MARKETING BUSINESS. DID YOU GET YOUR PORTFOLIO HERE AND IT LOOKS LIKE YOU NEVER RUN A MAJOR CAMPAIGN. WHY SHOULD I HIRE YOU TO HEAD OUR NEW INITIATIVE?

IF YOU DON'T MIND MY ASKING, WHAT ONE YOU THE IDEA I WAS ONE OF THE BEST IN THE BUSINESS.

HA? I DON'T REMEMBER. JUST WORD OF MOUTH OR SOMETHING - OH, YOU'RE GOOD.

THANK YOU, WHEN CAN I START?

I WAS RECRUITED BY DOGS AS A KID, I LIZZIE HAD THEM TRAINED ME TO DO 'THE SIREN PHYSICAL' MY DEE... MY DEE... PHYSICAL . MY DEE... MY DEE... PHYSICAL. TAKE CARE OF YOU...

AND A LOCKWASTE TO YOU TO TRY TO OPEN IT. ITS THE MECHANICAL MX. ONLY YOUR LOCK AND FINE YOURSELF FROM ANY RESTRICT.

I ADMIRE HARRY HOUDINI... HE DIDN'T OPEN ANY LOCK... AND FINE YOURSELF FROM ANY RESTRICT.

SURE, COME ON, IT WAS FANCY AND SHOWMANSHIP... BUT IF I WONT KNOW WHEN HE SERETIONLY ELABOURED HUMANS.

BRUSHES!

UNDO..

SHUTS NOT EVEN A LEGAL.. MISS.

OH, I HOLD ON TO EVERY SMALL COINS, CAPEMANY. MISS.

OK, I CAN'T FREE ALL OF (RUTH.

NOW, I CAN'T FREE ALL OF (RUTH.
