Oliver In Run-off Today

Municipal polls in Pasadena are open until 7 p.m. today to decide the contest between Caltech's Dr. Simon Ramo and the incumbent Director Clarence Oakley for the Pasadena City Director. In the earlier municipal elections, Oliver polled more votes than his opponent, but the presence of a third candidate and the necessity of a majority of the votes cast for election made today's run-off election necessary.

Oliver, who has been a professor of economics since 1959, supports an active program of urban renewal and has campaigned for strong zoning in Pasadena. According to Bill Bartpath, one of Oliver's active supporters on campus, there is a very good chance of Oliver winning if he can get out all of his support.

"The election will probably be decided by whether we can get the most votes out on the campus. So I'm telling everyone to go out and vote if they haven't already done so."

SOPH BEACH PARTY SATURDAY

Little Corona Del Mar; starts at noon.

Caltech's beautiful new Beckman Auditorium, the epitome of modern architecture, will soon be more accessible to student use. See editorial, page 2.

Dr. Simon Ramo, a distinguished scientist-industrialist, will visit the campus next week as the YMCA's Leader of America. During the afternoon, Thursday, and Friday Ramo will deliver four discussions in Winnott Lounge, one in Winnett Lounge, a major address in Beckman, and a few random talk sessions in the YMCA Lounges.

The first discussion will be in Winnott at 3 p.m. Thursday afternoon. The usual assembly hour, and is entitled “Which Is It—the Atomic, Space, or Electric Age?” This will be followed by the major address in Beckman, entitled “The Coming Partnership of Man and Intelligent Machines.”

Ramo will give three daily 4 p.m. talks in Winnott and an additional (as yet unannounced) talk at 7:30 p.m. Thursday night. Miss Collins herself will grace the Y lounge at 8 p.m. on Thursday.

Ramo will be the first Y Leader this academic year, since Dr. Abraham Maslow unfortunately could not appear due to ill health. The YMCA Leaders of America program was originally started in 1954 with the funds left along with an endowment bequest by the late Robert A. Millikan.

Techman Makes Good

Ramo received his PhD magna cum laude from Caltech in 1938, when he joined the General Electric Company as Director of Research, Electronics Department, and Director of Guided Missiles Research and Development. Ramo originated and supervised Hughes' electronic and missile operations and organized one of the largest technical teams in the nation.

In addition to all of this, Ramo will have lunch and dinner with Lloyd House on Wednesday, attend the coffee hour, and hold a cocktail reception at a faculty home at 9 p.m. on Thursday.

Ramo is particularly concerned with the impact of technology on modern society, and many of his discussions will cover the topic in some depth. Oddly enough, he is also an accomplished violinist and will perform some of Bach's violin sonatas in Winnott at 4 p.m. Thursdays.

Ramo will be the first Y Leader this academic year, since Dr. Abraham Maslow unfortunately could not appear due to ill health.

The YMCA Leaders of America program was originally started in 1954 with the funds left along with an endowment bequest by the late Robert A. Millikan.

A meeting March 10 brought potential solutions to the Beckman Auditorium problem. The meeting was attended by President Dubridge, Dean Eaton, K. Jacobson, and Dr. Pings of the Beckman Committee; ASCIT president Fred Brunswig, YMCA president Mike Cunningham, and representatives of the Band, Glee Club, Drama Club, and Tech. Little by little there evolved what we consider to be an entirely reasonable Beckman fiscal policy.

The administration’s position had been that it would be an “irresponsibility to our donors to permit indiscriminate free use of so valuable a facility, thereby using up funds so desperately needed elsewhere.” The original position of a “token” $150 use fee was a means to this end. This fee would be neither charged on limited budgets.

The students had Contended that the use fee was not a “token” fee to activities operating still avoid indiscriminate use. Other Compliments would such as Glee Club and Band Concerts would have the problem of whether or not admission was charged had been an “unforeseen oversight by the faculty Beckman Committee—had proven impossible, for worthy and general events.

Prepared to meet agree, the students were surprised to face men of reason. DuBridge frankly admitted that the criterion had been that it would be an “unforeseen experiment.” Events providing “official Institute representation to the public,” such as Glee Club and Band Concerts and Asct-Alumni Assemblies, will henceforth have the problem of whether or not admission is charged.

It must be emphasized, however, that at this stage these are working Classes and Students of the Democratic Republic of Vietnam. It seems that these Peace-loving Working Classes and Students of the Democratic Republic of Vietnam, were viciously attacked by the Imperialists. Lack of the War-Mongers and Fascist Comrades. In a dedicated battle to preserve their workers’ paradise, the Working Classes and etc. have declared March 19 “Day of National-Wide Struggle Against U.S. Imperialism.” The release ends with a plea for Lovers of Peace everywhere to protest against U.S. Imperialism by demonstrating, risking, and resisting anything else that comes to mind. Maybe beating up a few dirty, crummy, lying, peace-hating, lousy, yellow, capitalist, fascist dogs.

The Notre Dame Scholastic brings us news of yet another obstacle to peace-lovers of the world. The word is that the beautiful new Totem Park Girl’s Dorm at the University of British Columbia was completed by an eight-foot wall with spotlighted windows. There was to be a very effective burglar alarm, and is crawling with sensitive microphones that can easily be seen as one who has risen from the ranks, by his union with both the men and the music; but he lacks the dyna-

Fees of the Russian Chorus can do it consistently — and consistently well. Love in a Clutch

The review of the Love in a Clutch Dress informs us, via the Cal Poly El Mustang, that the Minnesota Senate is considering a bill making it unlawful for the driver of a car to have his/her face around the passenger or vice versa. Senator F. J. Anderson moved that persons under 21 should be exempted. “If his little spark of romance is still burning, we shouldn’t extinguish it.”

Love in a Clutch

We hope this reasonable plan works.

We would like to commend: President DuBridge, Dean Eaton and his Committee, for their cooperation and willingness to seek a solution; Brunswig and Cunningham, for their efforts at getting the job done; and finally the former Tech editors, Galley and Oliver, for placing the matter before the Institute community. We hope this reasonable plan works.

Hears Yale Russian Chorus

Knocking the acoustics of Beckman, I felt that letting the chorus sing in that place would be rough. The hall fit the bold sound of the chorus, mesmerizing in many brilliant moments of vital intensity. degenerates, a girl has four seconds from the time she and her date get to the door (as indicated by the microphones) to get inside without triggering the burglar alarm. Looks like the big thing at the University this year is to break through some of these doors in order to get to the exciting form of “Beat the Clock.”

More Campuses

(Continued from page 2)

pedit the Techmen on the back with: “The girls found that dating Techmen was superior to going with boys from their own school.” Also comforting was the informa-
tion that these girls felt that Georgia Techmen, individually, were no grasser than any other males; and that “anyone, without the benefit of female companion-
ship,” would have the tendency to vulgarity” found in Techers of all nationalities.

On this same note, we draw out a letter by Chaplain Herbert Hodgson in the Rensselaer Poly-
technic discussing the “high de-
gree of anxiety” Rensselaer stu-
dents showed over having college
 girls think of them as “Slipstick
coeds.” “Among the many clever and creative acts was one involving
‘word association.’ The last word in the series was ‘RIP,’ and the immediate response, in chau-
*rus, was ‘animal.’ And this was greeted with a cheer from the student body which equalled any that evening.” “Are we,” asks the Chaplain, “overconcerning?”

Sex

Speaking of earrings, which we weren’t, we note in the Antioch Union Record that the local med center receive five backs and parental permission before they’ll undertake an ear-piercing opera-
tion. Aside from the fact that this price is outrageously high and that a sharp needle and sanitizer roomate can do as good a job any day, we were reminded at the indifference displayed by the Antioch Union Student body: “I should care,” writes an apathetic reader, “if people get their ears pierced?” We would, especially if it was our roommate.

Selma Marcher Speaks Today

By J. C. Simpson

Anything would be an improve-
ment after the Goldbergs, so the new show at the Ice House is definitely better than the last one I reviewed. Overall the show is enjoyable, but it is not up to some of the really good ones at the Ice House earlier this year.

The first act this week is also the best. Charles (I think) O’Hegarty is a London singer with a haircut that much resem-
bles the Beatles’ and a matching beard. He has a unique and very enjoyable repertoire of 17th and 18th century folk and pub songs, most of which were entirely new to me. He presents the songs very well and is delightful to listen to. If he doesn’t sing “Bobby in the Bagel” that much resembles the Beatles, make sure he does it in an encore.

Third Strike

The second act is Stewart Clay, who is making his third appear-
ance at the Ice House. Clay’s act this time does not seem as good or as solid as the last time he came, but he seemed to get a good reaction from the audience. In general, his act depends much more on his unique personality than on his singing ability. Many of his songs were old and worn, such as “Super Skier,” but a few were quite good and his many and sordid comments helped make the act more enjoyable.

The lead act is a comedy and singing team, Jerry and Myrna Mote (real names), that is also appearing at the Ice House for the third time. The best descrip-
tion I heard for the act was that it was “OK.” That it was, but was also undistinguished. The comedy got good at times, as in their protest song against grow-
ing old, but in general it was only average.

Greenwood County Singers

If you don’t go to this show, be sure to go in two weeks. The Greenwood County Singers will be back from April 13 to 25, along with O’Hegarty and Clay. If you don’t believe they’re as good as I always say, see them. They really are.

Ranger 9 Hits Moon

By The Frogs

The moon is approaching rapid-
ly now. The crater Alphonsus looms large; we can easily see its crater-dotted rills. A stout perma-

Ranger has been completed and has been a smashing success.

Historical Background

The crater Alphonsus, into which the spacecraft glanced, was chosen for several reasons. It has a central peak, an uncommon structure in craters caused by meteor impacts, but frequently found in volcanic craters. Its walls are from seven to ten thou-
sand feet high. Astronomers have reported seeing activity in this crater.

Technical reasons also entered into the choice. Slopes are most apparent if the sun is near the horizon, as shadows are lengthen-
ed. Thus the target should be near the moon’s terminator, or sunrise-sunset line. Also, because of the limited energy available from the Atlas-Agena which launched the probe, the target should lie near the plane of the moon’s orbit. Alphonsus, being in the moon’s “tropical” region, and at that time being just about on the terminator, was thus ideally situated.

First in Space

This trip included two firsts. On previous missions, the craft was not reoriented as it neared the moon. As a result, the camera-
eras were not pointed along the line of the craft’s travel, so that

Baseball Team Ends Term On Happy Note

The baseball team finished off last term in a blaze of glory by coming from behind in the ninth inning to defeat LA Pacific College by the score of 12-11. Things started off pretty fast with Tech scoring 1 run in the first and 3 runs in the second, mainly on walks and hit batsmen. LA Pacific then changed pitchers, but this did not seem to make too much difference, as the Beavers scored 3 more runs in the fourth. Two of these came on a bases-loaded single by Chuck McQuillan. But meanwhile John Diebel was having difficulties with opposition batters. He was roughed up for 2 runs in the first, 2 in the third, and five in the fourth.

Lucky Win?

At this dramatic juncture of the game Tom Resney stepped up to the mound to save the day. He pitched the last four innings, allowing two runs, only one of which was earned, while striking out four. Meanwhile, our valiant warriors were pecking away at the L.A.P.C. lead by getting a run in the seventh and two in the eighth. Then, in the dramatic ninth, Eastment singled, Myers sacrificed, but was safe on a fielder’s choice. Resney was safe on an error, and McQuillan’s single tied the score. As darkness closed in, threatening to stop the game as it stood, Phil Paine (Continued on page 5)

Beer on the rocks?

(Oh, no!)

The other day, for the first time, our brewmaster heard of “beer-on-the-rocks.” He fell apart.

He really doesn’t have anything against ice cubes . . . for scotch or old-fashioneds or lemonade. But not for beer. Especially the King of Beers.

You see, he knows how much extra time and expense it takes to get that Budweiser taste and smoothness and drinkability. Add a couple of ice cubes and “bloop” . . . there goes all that extra effort.

Ice cuts down the head and waters down the taste. And, with Budweiser, that’s a tragedy. Budweiser is the only beer in America that’s Beechwood Aged. We allow Bud to brew its own tiny bubbles . . . slowly, naturally . . . over a dense lattice of beechwood strips. That’s why Budweiser tastes better, foams better and sets better—glass after glass.

So if you know somebody who likes to plunk ice cubes in his Budweiser, please don’t tell our brewmaster. (We hate to see a grown man cry.)

it’s worth it...it’s Bud®

IH Basketball Starts

BY JUNE

Who says that the basketball season is over? As far as the seven Student Houses are concerned, the season is just about to begin.

During the first week of the new term, all seven teams have been madly practicing for their first games next week. Each team has been assigned a court each day, either one of the four inside baskelets or one of the sun-drenched, sloping expanses outside.

In general, most of the players are in exceptional shape. This is not very surprising when one remembers that all had two weeks to get in shape—finals week and the spring break. So the one-week practice period, if you care to count registration day, is more than sufficient for the players to polish their moves.

Balanced

The "league" appears to be well-balanced this year—a few good teams, some mediocre teams, and a couple of pretty bad teams. Overall, the caliber of play should not be nearly as good as it was last year or the year before.

The race for first place should be between Page and Blacker. Fleming should not be counted out just yet. Last term the Flems finished sixth or seventh place, but is not up to the standards of the other three. Ruddock, Dabney, and Lloyd will need a lot of breaks in order to crack the first division.

Losers

Fleming should not be counted out yet. Last term the Flems seemed pretty confident of a sixth or seventh place finish, but then Toddler transferred back to Tech at the beginning of the year. He was one of the stars on the Freshmen basketball team 2 years ago.

Moon Invaded
(Continued from page 3)
last few pictures were somewhat blurred. In this flight, the so-called terminal maneuver was performed, so the pictures will be sharper.

The other first was the spectacular live transmission of the lunar shots. There has been live TV coverage from satellites before, but never from a space probe. A JPL official commented that this show would probably steal a little of the credit away from the previous day's manned Gemini, which included only a live TV camera, because of the interest and questions at the press conference following its presentation. But this was a concern only with the live TV system.

Plagued with Failures
Project Ranger was perhaps the most expensive, yet most frustrating space effort ever made by the US. The first two flights, tests of the Atlas-Luna with dummy Rangers, failed to get out of their parking orbits. Ranger Three performed its midcourse maneuver wrong, doubling instead of eliminating its trajectory error. Ranger Four hit the backside of the moon. Ranger Five also failed, allowing Ranger Six to work fine until the time came to turn on the camera. Then came the three great successes highlighted by last Wednesday's film.

NASA originally envisioned Hanger as a lunar reconnaisance probe. This it was, but in the course of its development, JPL-invented new camera systems, guidance and control systems, and perfected the midcourse maneuver. The Matadors to Venus and Mars are direct descendants of Project Ranger.

Hanger will be followed by the lunar Orbiter and the Surveyor soft landing vehicle, both to come within the next couple of years.

Blacker Campus
(Continued from page 3)
For a choice of you in Blacker who think that nothing will ever surpass the piano-smashing craze, take heed, for the University of Utah is trying. A frosh engineer splashed around in a two-by-four foot shower stall in his dorm for 75 hours and 24 minutes. The world's longest shower by a student.

When he finally left his watery refuge, the frosh was greeted by cameras, reporters, a horde of students, and a live broadcast from his parents. Well, Blacker frosh, what are you waiting for?

Which Came First—the Henry Or the Erg?

BY DROLL DESSINGER
One day on the Bar-Mitch Ranch in Texas a problem arose. A state farm inspector was conducting an inspection of the state’s egg producers, and at the same time writing up his report. He found the highest quality hen eggs in the state.

The farmer of the flock of 200 de- ded that Fatty, the chubby boy, would probably be able to determine the percentage of the eggs that were the best by running an experiment with the workers.

After a few weeks, Fatty came to the conclusion that all of their hens laid equally good eggs. This became famous across Texas as the “chubby chef’s hen equality.”

Eager Beavers

paid to personalization, recommendations, and interviews; the student with “spunk”—as Dr. Peter Müller, associate director of admissions, put it—was sought.

It is difficult to assess the effects of the new admission procedures, partly because it is impossible to distinguish the effects of eliminating fresh grades from the effects of the new procedures, and partly because of the differences which may appear only in very subjective form. Foster Strong, Dean of Freshmen, did make a tentative evaluation: “I think the freshman this year has more interest; that is, interest in the world here. I think we have fewer worry-warts this year. They are more imaginative… I feel that some earlier classes would have taken the nongraded experi- ence harder. This class has the seeds of developing the kind of men the alumni want to have… .”

When the Admissions Committee prepared a rank list from the applicants for purposes of study after the freshmen were selected last year, it was found that more from the lower positions in the previous list than in the previous list. Does this mean that the freshmen are less competent academically?

Some instructors may feel this to be true to a limited extent but feel it more than compensated for by the increased interest and awareness of the freshmen. As Dean Strong put it, “We’re not picking freshmen to succeed as freshmen, we’re picking fresh- men to succeed as seniors.”

Psychologically Meaningless

Dr. Kenneth Eells, Institute psychologist, noted that most of the changes he observed in fresh- men were probably due to the elimina- tion of grades. He pointed out that increased emphasis on inter- views should give the boy who responds well to a tense, nervous situation an edge. When asked if the psychological tests adminis- tered to them had shown any changes in the front of the last two years, Eells stated: “… They would suggest that differences exist, but it is hard to describe in meaningful terms exactly what they are. I wouldn’t want to say whether the changes were for better or worse.”

Admissions procedures for the future have not been changed, except that the spirit of the elimi- nation of the rank list will be upheld. Müller pointed out that this year there have been fewer freshman applicants (for the class of ’69) than could be wished, and attributed the drop to two causes first, the tuition increase, which has caused a drop in the number of applicants; and second, the fact that the Institute, the only American college to do so, required the College Board Level II math test—a new test last year. The test was only adminis- tered once and was not well publicized, thus many potential applicants lost their opportunity.

No Mistake

No one feels that requiring the test was a mistake, however, since it has correlated “amazingly well, almost perfectly” with Math I performance. MIT is following our lead, a bit rod-facedly, in re- quiring the test of its applicants.

XB-70 America’s Newest Eagle Outraces The Sun!

The XB-70 is a 2,000 mile an hour aerodynamic wonder. But she can’t fly without equally-advanced fuels.

Standard Oil’s research skill is providing them.

Standard, in cooperation with the plane’s designer, North American Aviation, Inc., also developed the special hydraulic fluids she needs at supersonic speeds and 70,000-foot altitudes. This continuing research is your assurance that Standard’s automotive products will be ready to deliver all the power and performance designed into your car of tomorrow.

The Chevron—Sign of excellence

The man at the sign of the Chevron is proud of the very advanced research team… highest quality S.O. products take better care of your car, boat or plane.
