YMCA’s Little Braves Program Gives Local Boys ‘Father Image’

by Rich Short & Emden Gansner

There are around 900 fatherless boys in grades 1-3 in the Pasadena area, largely due to the high rate of divorce in this area. Many, who would greatly benefit if given a “father image.” This image can be supplied through a program run by Pasadena YMCA’s Little Bravis program.

The program was initiated by Larry Turner of the program when he found that the Y’s father-in-law Indian Guides would not work when there is a fee. He has been working for about three years recruiting interested college students and high school seniors to work as substitute fathers. The program gives grants so that there are now some 18 to 20 tribes of Little Bravis.

Last Monday night, a Caltech Freshman started a tribe on campus consisting of 11 undergraduates working, one-on-one, with a “father” from the surrounding community. The plan was to get the tribe net to get acquainted, play games, and to relate to each other. The tribe met to get acquainted, Fuller Seminary, aids, Short, particularly in contacting the boys.

This year, there are plans for forming 3 tribes on campus, each with five to ten Caltech students and an equal number of little braves. However, the effectiveness and success of the program will depend on the amount of help Caltech students give to the program. Participation in the program is a worthwhile experience, both fun and challenging. Anyone who would like to become involved can contact the community and work as a big brave should see Rich Short, or contact him through the Caltech Y.

News Briefs

Messiaen Week Soon

Next week should be declared Oliver Messiaen Week. Leonard Stein, a noted authority on contemporary music, will give an illustrated lecture on Messiaen, the great French composer and musician, and about 125 guests, all members of the local Los Angeles and Caltech communities. Any students interested in attending the dinner should contact Jerry Glashagel in the Y.

Alinsky to Give H40 Session

Saul Alinsky to Give H40 Session

by Emden Gansner

Saul Alinsky, known sociologist and professor, will be on campus October 14 to discuss various problems with the Caltech community. His visit will be part of the course History 40, “Issues in Practical Politics,” offered for the first time this term. The Caltech YMCA is also cosponsoring the visit.

Starting at 2:00 p.m., Alinsky will be discussing with interested individuals H 40 students ways of organizing groups to produce effective politics. Then, at 4:00 p.m., an open seminar will be held in Winnetti Lounge with Alinsky talking with students on making “Politicization Work.” Some local social studies classes may also be there to add to the discussion. Finally, that evening, dinner will be held at the Athenium for Alinsky and about 125 guests, all members of the local Los Angeles and Caltech communities. Any students interested in attending the dinner should contact Jerry Glashagel in the Y.

Alinsky received his PhD from the University of Chicago and has also received an LL.D. He has served as a political advisor to many local politicians.

ASCIT of Seita

Smith Resigns from IHC Chairmanship

by Alex Seita

The movement for this Festival has much arose from the B.O.D. ranks. Also, one suggested opinion was that the Festival would compete with the Art and Technology Festival. Smith was urged that ASCIT help support and build an eight-hour Dance Space between Winnetti and Firestone. Bennett urged that a project-contract of laser beams moving and flashing across the sky in tune (sensitive) to rock music. Computer art shows in Winnetti were proposed, with a temporary music sound track provided by a futuristic future developer of laser technology. Computer art shows in Winnetti were proposed, with a temporary music sound track provided by a futuristic future developer of laser technology.

Janel Langbaugh of the American Council on Education has pointed out that the B.O.D. is the “right” to use the Institute facilities. Bennett indicates that any group with an interest in using the facilities may apply to the Institute authorities for the use of the facilities. Bennett also indicates that the B.O.D. is the “right” to use the Institute facilities.

We Want YOU for the ARP

The ARP has been working for about three years recruiting interested college students and high school seniors to work as substitute fathers. The program gives grants so that there are now some 18 to 20 tribes of Little Bravis.

Campus Political Action Policy Statement Issued

by Paul Levine

After several weeks of study, the administration has released some guidelines for an upcoming Festival. Copies of this were mailed to the faculty earlier this week, and as soon as the mail rooms can get everyone’s address straight, every student will receive a copy.

The last few weeks have seen a great rise of political activity here, and the administration felt that the Caltech community should be made aware of the problems that could arise. The American Council on Education has pointed out that the Tax Reform Act of 1986 “absolutely precludes participation in or by intervention by any exempt institution in any political campaign on behalf of any candidate for public office.” In addition, any action by an education institution that does not particularly agree with the sentiments of the surrounding community may invite political reprisals, making the school a “political football.”

New IH Dance Format
by millikan troll

Interhouse is dead; long live Interhouse. Talk of replacing the traditional form of residence life heralds the Southern California rainy season, with some sort of Institute-wide happening on the horizon. At a recent IBC meeting, five of seven houses expressed some form of support for the idea, while the other two indicated that they would like to remain as they are.

The re-organized Interhouse would be held on the Olive Walk, or possibly Knickman Mall, and be an all-day affair. The event might become a sort of joint exhibition art and technology, including light shows, laser art, etc. The possibility of hiring a band such as the Grateful Dead has been mentioned.

How about the money? Possible sources might be the President's special fund, student relations money, ASCIT, and the alumni. Watch for further developments.

Space for Rent
Dr. Dave Smith would like to utilize some of the space under the old houses. One possibility would be to create a Coffeehouse in the "last-minute corner," or at least have the advantages of central location and lack of owner. Also, seminar rooms and offices could be installed for many organized groups, including informal "free university" type classes. Now, where can we get the money?

Fleming proved to be the first beneficiary of a campaign to upgrade the pianos in the student houses. The Yamaha baby grand which graces the lounge is quite nice, and is actually almost in tune. The pressure will be on to bring the other houses up to par. Offers from the various theater companies to do theater here have been received. Some administrators have commented on the air of "calm" which has pervaded this and other campuses this academic year, at least so far.

Freshman Follow-Up
The most popular of the three L.A. area tours for freshmen proved to be the one to Mount Palomar, which surprised the beach advocates. Next year will probably see freshmen orientation held on campus again. More faculty seminars with a wider variety of topics will be held, if possible.

Top of the Week
The Elaine Shields Award for this week goes to Joe Rhodes for not having his name in the papers this week. Spino Agnew is a close runner-up for accusing Presidential candidates of being "permissive" on the Scarsion Report.

Attention
In a recent interview, the Gloe Club plans imminent concerts in the lounges of several houses after dinner. Book copies of the Tech are now being impromptu on microfilm. The Clean Air Car was broken into recently, according to our sources.

Financial Aid Meeting
Set for Friday
On Friday at 12:30 p.m. in Goodwin 222 Gates to discuss the possibilities of getting a fellowship for next year. In addition to making suggestions as to how and when to apply, he will field questions. Grad and undergrads are welcome.

ATTENTION INTERNATIONAL STUDENTS
Call M art on Lewk TRANSCARGO, INC. 2940 E. Figueroa St., Los Angeles, Calif. 90063

Each of the following discussions inevitably lead to rhe­

ruiety for one's own health and social responsibility for the trend towards anarch y, violence, and social revo­

stance that they were unable even to give their drugs away.

If you want to try to make the campus a sanctu ary. First, each house could make a member or members be house-watchers and make that person cool, and things like this may have a definite effect on the health and safety of the campus.

In the recent interview by a Tech to attorney Robert S. Cagen, he quoted what he called a reliable source saying that police witnesses commit perjury in 90 to 90% of drug cases. He emphasizes that such "radicals" get caught.

What constitutes possession of a green drug in the eyes of the law? It is defined vaguely as a "usable quantity," a definition which ob­viously varies from area to area. In Orange County a roach might be so defined, while in Topanga it may take six joints or more. Generally speaking, any quantity of marijuana amounting to more than one joint would be defined as a usable quantity. One would not be subject at arrest if a small trace of the drug were found, say on the carpet or in a container, or if other physical evidence such as a hookah with ashes found; however, the police could and probably would use this material as a justification for future harassment.

In an article recent to tech to attorney Robert S. Cagen, he quoted what he called a reliable source saying that police witnesses commit perjury in 90 to 90% of drug cases. He emphasizes that such "radicals" get caught.

If you are arrested, contact your lawyer and wait for him. Say nothing until he arrives.

Be cool. Don't carry anything on your person that you can't eat rapidly and do not use anything at large parties or noisy places where there is a good possibility that the police will be called.

Stash your stuff on a neighbor's property, or somewhere in a corner of the back yard. No one, including your best friend, should know where your stash is.

Organized crime has only become involved in marijuana dealing since Operation Intercept made it difficult for them to bring their goods northward. The largest recent shipments of marijuana, the embargoes which such companies have involved the Mafia, and their efforts to move into the Haight-Ashbury and deal in that market with such difficulty that they have decided to give their drugs away.

You may try to make the campus a sanctuary. First, each house should make a member or members be house-watchers and make that person cool, and things like this may have a definite effect on the health and safety of the campus.

Also, the concept of a "well run" campus is not uncommonly brought up by those advocating the requirement. It should and has been brought up on Page Three.

Encounter Lab
Scheduled for October 16-18, the Caltech YMCA is sponsoring an encounter lab for the weekend of October 16-18. The group will be cooled and will be directed by the Institute psychologists, Dr. Ian Hunter and Dr. Nancy Beakel, and several outside psychologists will also be about eight follow-up sessions held in October, November and early December in the Pasadena area. If you are interested in learning about yourself and others, and would like more details, check with Dr. Dave Smith.

Before the Front

by David N. Deloria

Is the movie an art form, or is it a means for money-making? For years the European and American masters of the medium have battled; each has tried to convert the other to art or money respectively. In the past few years, some moviemakers, advancing the preposterous idea that the two ideas are compatible, have made art, low-budget films that proved themselves and did indeed make money. Easy Rider is a prime example. Americans are not ones to ignore a good idea, and American movie-makers seem to have moved in two directions from the Easy Rider starting point. First, they have made bad, arty, money-making imitations, like Getting Straight. Second, they have made good, arty, money-making imitations.

In all, it is easy to see how this film won the Grand Prize at the Cannes Film Festival. Take a date and see for yourself (rated E for excellent).

The Dope Sheet

Continued from Page Two

...compact themselves. Three rules should be enforced strictly. In addition, I think there should be a set of visible rules for patrons and outsiders; these would be rules which, although they would not be realistic if actually applied to the house, living situation, etc., would be enforced strictly. In addition, I think there should be a set of visible rules for patrons and outsiders; these would be rules which, although they would not be realistic if actually applied to the house, living situation, etc., would be enforced strictly.

Three people, male, female, and age, are mysteriously trapped near the front of an unspecified battle, of an unspecified war, in an unspecified country. I don’t even know what language they’re speaking. Which side of the front is never made clear. In this instance “before” seems ambiguous. Nothing during the movie interrupts the players, except occasional flashes of exploding shells or lightning and the intermittent. The problem is that the film is too mysterious. The idea of simplifying or perhaps essentializing a situation and providing an unsung but specific message from the outside is valid; but the audience gets very little to grasp. As in all art, the focus seems to be on the tragedies of the protagonist. The film is in effect teleseopic; the three heroes are isolated not only together away from the war but individually away from each other. At times it seems ironic that the camera may have all three subjects in the same scene; they appear so far from each other. Lederer emphasizes (or perhaps Mann, but I doubt it) this irony by panning on all three only when they are apart from each other. Whether physically or metaphorically separated is never made clear. Fog, the old carbon-dioxide just below the edge of the picture, brick, separates the actors from each other, and, if need be, from the camera. The fog seems omnipresent; the bleak landscape seen between the shifting shadows gives the foreign flavor to the film.

The bickering and infighting of the film are pointless; one is never quite sure of the Director’s purpose. I will venture a guess and say that unification of the trio is the ultimate goal, but the picture ends too soon for me to say.

The slight mood of pessimism which is almost certainly attributable to Mann we soon learn is only a foil for the prevailing tone of optimism. Indeed, optimism carries the picture and in itself makes a success rather than a failure. But I am not sure who is responsible for the optimistic approach. The source of the underlying tone is doubtful, the tone seems to be postulated, and the existence of a bell is unimportant.

The two problems of the creation, whether it is art, and whether it is film, are unrelated to the actual events depicted. The solution to the problems like the end of the flick must await revelation. The third problem, whether it will make money, answers to my pitiful powers of prescience. No.
It was pointed out that NSF, under terms of the grant, had finally say upon the usage of the remaining funds—but ASCIT had the right to make suggestions. Upon further investigation by the B.O.D., the matter of a projects director was referred to a future date, when information would be available as to the likelihood of the acceptance of the idea by NSF.

Financial Deficits

Terry LaGonee reported that project losses on the "Big T" and "Little T" will be approximately $500 and $350, respectively. Considering that ASCIT has $400 in its contingency fund, $450 from areas will necessarily be used to cover the deficits.

Coffeehouse

Going to the coffeehouse, the board accepted the resignation of Dave Green and Gary Ruby, two of the four coffeehouse managers. This leaves Stu Sando and Dave Turner to continue running the place of culinary delights.

Voting Procedure Change

Alex Setta made a suggestion that there should be a change in ASCIT voting procedure. This change would introduce a corporatization-type balloting where ballots and information are mailed out two or three days in advance to achieve two objectives: (1) to give students more time to think about complex voting issues (e.g. by-laws changes) and (2) to bring a greater turnout in voting. Setta was tasked to present this idea further.

Other Announcements

In addition, the following announcement was made by Doug Duncan, Business Manager of the "Little T" and in charge, together with Terry LaGonee, of honor keys and certificates—"The 'Little T' is here. It speaks for itself," and "all honor certificates and all but 20 honor keys have been mailed." Following that, Homer Schuster was commended for his editorship on the "Little T.'"

The Caltech Forum

It was pointed out that physical activity is not the only thing that contributes to this goal. If the Institute wishes us to graduate a complete person why are not equivalent sums of money spent on social development? Things like concerts, art shows, camping trips, etc., also add to making one well rounded. However, effort in this field has been lacking so the Institute expenditures effectively nil.

For now a moment let us consider the point that some form of physical education requirement is good. What now must be determined is what the present system is achieving these goals. I believe the system and the goals are understandable. However, if the system and goals are good, I wonder how it fails.

There are two types of undergrds. Some would participate in sports whether varsity, intramural, or personal. Others involve themselves in the various music or yoga or modern dance could excite and stimulate the mind and body. If the goal is to run a better system and continue operating the place ofIn the research or the final analysis would be able to receive part of the remaining money. However, members of the 1700 ARP proposed that a student be allowed to accept a job for a projects director who would professionally encourage students to present projects and to help receive funding for them. Recommended to the position by Stein and other 1970 ARP members was Stu Sando. The raisin' of 'em was that it was no longer possible to pay a person full-time to secure research projects year after year. Stein voiced the idea thinking that it would be easier for him had someone been able to help him—and someone knowledgeable in the channels of writing research proposals and in getting funds. Sando made a joke about being a prevent to all of the work in constructing an entire project was to ask "the student to commit academic suicide."
